

Manual Call Point Rain Cover Installation

product description: UFP-08

This product is made of imported PC material through one-time casting, the whole body is transparent, the inner and outer walls are smooth, beautiful and generous, high temperature resistance, high strength, impact resistance, good water release, dustproof and corrosion resistance, This product is suitable for supporting buttons and switches in various industrial and mining environments, high and low voltage power distribution cabinets, etc.

product size: unit (mm)

Installation guide:

<p>①</p> <p>First drill the installation hole on the wall with a pistol, then put the installation plastic particles into the hole, and then align the sea ling rubber ring of the raised base with the hole.</p>	<p>②</p> <p>After the sealing rubber ring is aligned with the hole position, first clamp the standard black sponge to the mouth of the raised seat, then align the raised base with the screw hole, and then tighten it with the extension screw until it is firmly fixed.</p>
<p>③</p> <p>Then align the bottom surface of the main body with the holes of the fixed heightened base and tighten and fix it with the standard short screws.</p>	<p>④</p> <p>Install the battery in the internal alarm, and then use the pull cord to pull the test.</p>
<p>⑤</p> <p>After the fixing test is completed, finally align the ear of the shell with the buckle of the base and press the buckle to complete the installation.</p>	<p>⑥</p> <p>The installation is complete.</p>
